Sitapaila, Kathmandu, Nepal | sjungthapa37@gmail.com | +977-9863037870 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Software engineer who thinks in systems — from database schema to deployment pipeline, not just the interface a user touches. Comfortable across the stack: React.js and TypeScript on the frontend, Django and Node.js on the backend, with hands-on experience designing RESTful APIs, async task pipelines, and CI/CD workflows. Recently shipped an AI-powered platform end-to-end, from architecture through production deployment. Eager to bring that same full-picture ownership to an enterprise environment working across React.js, .NET, and SQL Server.

EDUCATION

BSc (Hons) Computer Science | Herald College Kathmandu*Graduated December 2024*

- Awarded Second Class Honours
- Relevant Coursework: Web Development, Database Management, Algorithms & Data Structures

TECHNICAL SKILLS

Frontend: React.js, Redux, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Shadcn UI, Axios, Responsive Design

Backend & APIs: Node.js, Express.js, Python (Django, FastAPI, Flask), RESTful API design, JWT Authentication & Authorization

Databases: PostgreSQL (incl. pgvector), MongoDB (NoSQL), SQL querying & relational data modeling, exposure to Microsoft SQL Server

AI & Data: Groq API, sentence-transformers, vector similarity search, LLM-powered application design

Cloud, DevOps & Tools: Docker, Celery, Redis, GitHub Actions (CI/CD), Cloudinary, Git, GitHub, Render, Railway

Practices: Agile/Scrum, open-source contribution, code reviews, unit testing, sprint planning, clean code principles

PROJECTS

SkillMap Nepal — AI-Powered Job Skill Gap Analyzer | Personal Project

Django, PostgreSQL, pgvector, Celery, Redis, Groq API, Docker, GitHub Actions

- Architected and built a full-stack platform that parses user CVs, scrapes live job postings from the Merojob API, and computes skill gaps using pgvector cosine similarity search
- Integrated the Groq API (Llama 3.3 70B) to generate personalized, week-by-week learning roadmaps with curated free resources based on each user's missing skills
- Designed a Celery + Redis task pipeline for asynchronous CV parsing, skill-gap analysis, and roadmap generation with retry logic and status polling
- Built a GitHub Actions CI/CD pipeline running a 45-test Django test suite against a PostgreSQL/pgvector service container on every push
- Deployed the application with Docker on Render, optimizing memory usage to run reliably within a 512MB free-tier instance

Leave Management System | Personal Project

React.js, Node.js, Express.js, MongoDB, Ant Design, Nodemailer

- Architected a complete employee leave management system with role-based access control, JWT authentication, and Google OAuth 2.0 login
- Integrated Nodemailer for automated email notifications and built an interactive FullCalendar view for approved leaves

Clothing E-Commerce Platform | Leapfrog Connect (Final Project)

React.js, TypeScript, Node.js, Express.js, MongoDB, Redux, Cloudinary

- Built a full-featured e-commerce application end-to-end in a cross-functional team, with RESTful APIs for product management, cart, and order processing

- Managed complex client-side state with Redux and optimized media delivery with Cloudinary, improving frontend performance

Grocery E-Commerce Web Application | Herald College (Final Year Project)

React.js, Node.js, Express.js, MongoDB, Cloudinary

- Independently architected and delivered a complete grocery shopping platform — database schema, API layer, and React frontend from scratch
- Implemented role-based access control supporting admin and customer user types, reflecting real-world enterprise access patterns

Collaborative Note-Taking Application | Leapfrog Connect

React.js, TypeScript, Redux, Shadcn UI

- Built a feature-rich, accessible application emphasizing clean code, type safety, and component reusability with TypeScript and Shadcn UI

OPEN SOURCE EXPERIENCE

Frontend & Backend Contributor (Intern) | Jawafdehi.org *January 2025 – May 2026*

React.js, TypeScript, Python

- Contributed to the frontend codebase of jawafdehi.org, building and maintaining features using React.js and TypeScript in a collaborative open-source environment
- Led the frontend redesign of NGM Archive, a product within jawafdehi.org, delivering a modern, accessible, and responsive UI
- Built a new case search section in NGM Archive from scratch, enabling users to search and browse case details with filtering, pagination, and table management
- Implemented table filtering and pagination features, significantly improving data browsability for large record sets
- Developed backend endpoints using Python, including a court detail endpoint, expanding the product's API layer to support new frontend features

PROFESSIONAL TRAINING

Full-Stack Development Training | Leapfrog Connect *July 2025 – November 2025*

- Built and shipped multiple full-stack applications end-to-end, writing clean, maintainable, and well-documented code aligned with industry best practices
- Designed and implemented RESTful APIs, applying consistent patterns for error handling, data validation, and secure access control
- Conducted and participated in code reviews, enforcing coding standards and promoting shared ownership of quality across the team
- Worked in agile sprints — collaborating with teammates on feature definition, task breakdown, and iterative delivery using Git and GitHub
- Performed debugging and troubleshooting across the full stack, diagnosing issues in API responses, state management, and UI rendering

ADDITIONAL INFORMATION

Languages: English (Fluent), Nepali (Native)

Interests: AI-powered application development, open-source contribution, frontend performance optimization, clean architecture, UI/UX design
