PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building scalable, production-ready web applications using React.js and modern JavaScript/TypeScript. Skilled in designing RESTful APIs, managing application state, and delivering clean, well-documented code in agile team environments. Experienced in open-source contribution and cross-functional collaboration with designers, product managers, and QA teams. Eager to bring strong frontend expertise and backend fundamentals to an enterprise environment working across React.js, .NET, and SQL Server.

EDUCATION

BSc (Hons) Computer Science | **Herald College Kathmandu** Graduated December 2024

- Awarded Second Class Honours
- Relevant Coursework: Web Development, Database Management, Algorithms & Data Structures

TECHNICAL SKILLS

Frontend: React.js, Redux, TypeScript, JavaScript (ES6+), HTML5, CSS3, Shadcn UI, Axios, Responsive Design

Backend & APIs: Node.js, Express.js, Python (FastAPI/Flask), RESTful API design, JWT Authentication & Authorization

Databases: MongoDB (NoSQL); SQL querying concepts and relational data modeling; exposure to Microsoft SQL Server

Cloud & Tools: Cloudinary, Git, GitHub

Practices: Agile/Scrum, open-source contribution, code reviews, unit testing, sprint planning, clean code principles

OPEN SOURCE EXPERIENCE

Frontend & Backend Contributor | [Jawafdehi.org](https://jawafdehi.org) January 2025 – Present

React.js, TypeScript, Python

- Contributed to the frontend codebase of jawafdehi.org, building and maintaining features using React.js and TypeScript in a collaborative open-source environment
- Led the frontend redesign of NGM Archive, a product within jawafdehi.org, delivering a modern, accessible, and responsive UI
- Built a new case search section in NGM Archive from scratch, enabling users to search and browse case details with filtering, pagination, and table management
- Implemented table filtering and pagination features, significantly improving data browsability for large record sets
- Developed backend endpoints using Python, including a court detail endpoint, expanding the product's API layer to support new frontend features

PROFESSIONAL TRAINING

Full-Stack Development Training | **Leapfrog Connect** July 2025 – November 2025

- Built and shipped multiple full-stack applications end-to-end, writing clean, maintainable, and well-documented code aligned with industry best practices
- Designed and implemented RESTful APIs, applying consistent patterns for error handling, data validation, and secure access control
- Conducted and participated in code reviews, enforcing coding standards and promoting shared ownership of quality across the team
- Worked in agile sprints — collaborating with teammates on feature definition, task breakdown, and iterative delivery using Git and GitHub

- Performed debugging and troubleshooting across the full stack, diagnosing issues in API responses, state management, and UI rendering

PROJECTS

Leave Management System | Personal Project

React.js, Node.js, Express.js, MongoDB, Ant Design, Nodemailer

- Architected and developed a complete employee leave management system with role-based access control, supporting both regular users and administrators
- Implemented RESTful APIs for leave requests, approvals, and calendar management with JWT-based authentication and secure authorization middleware
- Integrated Nodemailer with Gmail SMTP for automated email notifications, sending real-time alerts to admins on new requests and to employees on approval/rejection
- Built an interactive calendar view using FullCalendar and Ant Design Calendar, displaying approved leaves with employee names and tooltips showing leave details
- Implemented Google OAuth 2.0 integration alongside traditional email/password authentication for flexible user login options
- Applied clean code principles with comprehensive documentation, including setup guides, API documentation, and troubleshooting resources

Clothing E-Commerce Platform | Leapfrog Connect (Final Project)

React.js, TypeScript, Node.js, Express.js, MongoDB, Redux, Cloudinary

- Designed and built a full-featured e-commerce application end-to-end — from database schema to responsive React UI — collaborating in a cross-functional team
- Developed RESTful APIs for product management, shopping cart, and order processing using Express.js, with clean separation of concerns and consistent error handling
- Implemented JWT-based authentication and role-based authorization, securing endpoints and user data across the platform
- Managed complex client-side state with Redux, ensuring consistent data flow and predictable UI behaviour across the application
- Optimized media delivery by integrating Cloudinary, reducing image load times and improving overall frontend performance

Grocery E-Commerce Web Application | Herald College (Final Year Project)

React.js, Node.js, Express.js, MongoDB, Cloudinary

- Architected and independently delivered a complete grocery shopping platform — designing the database schema, API layer, and React frontend from scratch
- Built scalable Express.js APIs to handle product cataloging, inventory, cart logic, and payment-ready checkout flows
- Implemented role-based access control supporting multiple user types (admin, customer), reflecting real-world enterprise access management patterns

Collaborative Note-Taking Application | Leapfrog Connect

React.js, TypeScript, Redux, Shadcn UI

- Built a feature-rich, accessible application with strict emphasis on clean code, type safety, and component reusability using TypeScript and React.js
- Applied TypeScript throughout to enforce strong typing and catch errors at compile time, resulting in more reliable and maintainable code
- Used Shadcn UI to deliver accessible, polished UI components consistent with modern enterprise design standards

ADDITIONAL INFORMATION

Languages: English (Fluent), Nepali (Native)

Interests: Open-source contribution, frontend performance optimization, clean architecture, UI/UX design

Availability: Immediate
